

Trainings glass assembly

Further training for our customers and partners

Our training courses on glass assembly convey knowledge about the material borosilicate glass 3.3 as well as practical assembly experience on glass plants.

In-house training for plant operators

The one-day training covers the procedure for minor repairs of pipeline components and fittings and the basics of stress-free installation by one of our experienced service technicians.

Technician training for glass assembly in the pilot plant and production

This three-day training course takes place at our main factory in Ilmenau and addresses our customers' fitters and metalworkers who want to install, maintain and modify glass systems. Training contents include an introduction to borosilicate glass 3.3 as material for plant construction, flange systems, frames and glass components, stress-free installation and compatibility. Depending on the background knowledge of the participants, we will of course also address specific wishes in detail.

Please contact our team for scheduling, more information and a training offer.
